Responsible Investment Policy Guide

The Local Authority Pension Fund Forum

The Local Authority Pension Fund Forum was set up in 1991 and is a voluntary association of local government pension scheme (LGPS) funds and LGPS pools based in the UK. It exists to promote the investment interests of member funds and to maximise their influence as shareholders to promote corporate responsibility and high standards of corporate governance amongst the companies in which they invest. The Forum's members currently have combined assets of over £350 billion.

About this document

This document outlines LAPFF's responsible investment policy positions covering environmental, social and corporate governance (ESG) issues. It includes such issues as carbon risk management, emissions targets and transition planning, employment standards and rights, human rights policies, workforce and board diversity, board structure, director remuneration, audit and accounting, shareholder activism, and stakeholder engagement.

1 Executive Summary

GOVERNANCE	
<i>Board of Directors</i>	
Board Balance	LAPFF takes a nuanced approach to board balance and considers board size and directors' skills, background and experience when assessing the quality and capacity of the board.
Board Diversity	LAPFF supports the principle of diversity and encourages selection of new board members from a diverse pool of candidates. LAPFF considers boards should voluntarily achieve a target of at least 30% women on the board and apply the Parker review targets for directors of colour.
Independence	Director independence is assessed in accordance with the UK Corporate Governance Code (the Code) and additionally on a case-by-case basis.
Combined Chair/Chief Executive	LAPFF supports the separation of the roles of chair and chief executive in all jurisdictions.
Chief Executive Appointed to Chair	Former chief executives should not be appointed to the position of chair.
Succession Planning	All company boards should have a succession plan, both for the board and for executives, particularly those companies with unique circumstances.
Time Commitments	It is important that directors have sufficient time to devote to the company's affairs. Shareholders will be assured of this if full disclosure is made of directors' other commitments and attendance records of formal board and committee meetings are provided.

Board Evaluation	The board should undertake a formal and rigorous evaluation of its performance with external facilitation of the process every two to three years, and should include a statement on this evaluation in the annual report.
Re-election of Directors	LAPFF supports the annual re-election of directors in all jurisdictions.
Board Strategy	LAPFF will endeavour to maintain its awareness of any corporate governance or corporate social responsibility issues surrounding shareholder approval of relevant corporate actions and strategy.
Mergers and Acquisitions (M&A)	Evidence suggests that M&A success and failure (measured in shareholder value creation or destruction) can be largely attributed to the quality of a company's M&A process. LAPFF believes that public pension oversight of the M&A process can improve the success rate of M&A deals.
<i>Expectations for Executive Pay</i>	
Fixed versus Variable Pay	Ensure that base salary is the primary vehicle for remunerating executives because base salary is, in our view, the up-front negotiated price for doing the job. The variable component of pay should be kept to a minimum for large-cap companies.
LTIPs	Phase out the use of long-term incentive plans (LTIPs) in favour of company-wide, long-term profit pools that use a straightforward formula for calculating bonuses based on base salary and seniority.
Quantum of Pay	Assess the quantum of total awards of pay packages in determining what would be considered 'reasonable' by shareholders and other stakeholders.
Pay Inflation	Set the total pay of any new incoming executives (either internally or externally appointed) at a level BELOW that of the outgoing executive.

Pensions	Ensure directors and officers participate in company pension arrangements on the same terms as other employees. Where directors or officers receive preferential treatment the reasons for this should be explained.
Environmental & Social Performance	Clawback bonuses and variable pay in cases where ethical standards are breached, or where poor environmental or social performance causes demonstrable harm to the company's reputation or social license to operate.
Performance Conditions	Align executive pay performance conditions with business strategy and the key performance indicators of the firm. Refrain from relying on earnings per share (EPS) and total shareholder return metrics (TSR) particularly when those metrics are adjusted to exclude discretionary exceptional items.
Performance & Payout Periods	Set performance periods according to a timeframe of three or more years and reflects the company's own business cycle. Pay out awards over a period of five or more years.
Pay Benchmarks	Discourage the use of market benchmarks for determining the comparative pay levels for executives.
Pay Ratios	Publish annually the ratio between average employee pay and average executive pay, as well as the ratio of pay between the top and bottom 10%. Provide a graph charting the pay ratio trends for the current year and the preceding five years.
Tax Planning	Ensure that efficient tax planning remains in line with the company's ethical and corporate responsibility standards. Refrain from using creative tax planning to increase executive pay.
Golden Hellos, Handcuffs and Parachutes	Discontinue the practice of paying 'golden hellos', 'golden handcuffs' and 'golden parachutes' regardless of the individual circumstances of incoming executive directors.

Investor Consultation	Proactively consult with institutional investors that hold long-term positions in the firm regarding their views on the company's pay practices. Endeavour to consult with both large and small shareholders; and, in particular, with those that may take a critical view.
Employee Views on Remuneration	Consider and include the views and recommendations of managers and employees when making remuneration decisions.
Discretion	Use discretion in executive remuneration ONLY to reduce overall levels of remuneration. Refrain from awarding transaction-related bonuses.
<i>Audit and Accounts</i>	
Accounts and Reporting	Accounting and reporting should be balanced, clear and transparent, in line with a true and fair view of accounts, with results represented in a way that captures all material issues, including relevant environmental and social issues and risks.
Financial Reporting Standards	The current legal framework regarding a true and fair view is sound but there are problems where the accounting standards do not fit with this. There are particular problems with going concern and prudence (as identified in the Sharman Inquiry).
Audit Committee Report	Companies should prepare a risk report as part of their audit committee report to shareholders, which should be subject to an annual shareholder vote.
Tax Report	Companies should report fully on their tax strategies and payments, including a country-by-country breakdown of tax payments in each jurisdiction in which they operate.
Internal Controls	It is the board's responsibility to set and fully disclose the company's internal control policies.
External Auditors and Non-Audit Services	The external auditor should be fully independent and should not undertake non-audit work, as this might compromise their independence.

Corporate Responsibility Reporting	
Non-Financial Disclosure	LAPFF encourages companies to describe how their corporate responsibility and sustainability policies align with and support the long-term corporate strategy.
Non-financial Incentives	Companies should endeavour to develop and report how non-traditional financial incentives and reward systems help attract, motivate and retain staff.
Lobbying	
Political Donations	LAPFF assesses the issue of political donations on a case-by-case basis.
Industry associations and lobbying	LAPFF expects that companies do not misuse their membership of industry associations to lobby for public policy reforms which contradict their public statements and public company position on an issue.
ENVIRONMENT	
Climate Change	
Carbon Emissions Reporting	The Forum strongly supports the introduction of mandatory carbon emission reporting in all jurisdictions.
Carbon Risk Reporting	The Forum strongly supports the introduction of mandatory carbon risk reporting.
Carbon Risk Management and Business Strategy	LAPFF considers that companies should report on their approach to carbon risk in the context of how they are factoring the management of climate change into their business strategy in line with a fair and just transition to a decarbonised economy.
Targets	LAPFF expects companies to provide information to investors on carbon management. This should include disclosure of Scopes 1, 2 and 3 emissions with targets aligned with a 1.5°C scenario.

Focus on Reductions not Carbon Capture or Offsetting	LAPFF considers that companies should be focused on actual emission reductions and not heavily reliant on carbon capture or offsetting.
Just Transition	LAPFF considers that transition to a decarbonised economy needs to be achieved in a fair and just way and that companies should have in place credible just transition plans.
Chair or Chief Executive Responsibility	LAPFF expects the chair or chief executive to have responsibility for the climate strategy.
Annual Say on Climate	LAPFF supports the principle of a 'Say on Climate' and encourages all listed companies to submit a Climate Transition Action Plan to a shareholder vote at their AGMs.
Climate Change Investment Policy	Members are encouraged to consider climate change issues across the fund and in investment policies.
<i>Sustainable Development Goals</i>	
Sustainable Development Goals (SDGs)	LAPFF supports the alignment of SDGs with responsible investment strategies.
Water and Sanitation	The Forum strongly encourages companies to consider water and sanitation in their business strategies.
Sustainable Cities and Communities	Companies should consider rapid urbanisation and ensure that their business models contribute to a more inclusive, safe, resilient and sustainable cities and communities.
<i>Environmental Risks</i>	
Deforestation	LAPFF expects companies to have appropriate policies and practices to manage the risks associated with deforestation.

Water and business strategy	LAPFF considers that companies should report on their approach to the use and protection of water resources in relation to their business strategies.
SOCIAL ISSUES	
<i>LAPFF Approach</i>	
Stakeholder Engagement	Effective stakeholder engagement by a company, including initiatives such as grievance mechanisms and other efforts to amass and integrate employee and broader stakeholder feedback into how the company operates, will enhance shareholder value both by addressing risks early and by tapping into innovative ideas for growth.
Quantitative versus Qualitative Reporting	LAPFF supports the call for narrative reporting that includes both quantitative and qualitative indicators, but does so in a way that conveys a meaningful description of how human capital contributes to the long-term value of the company.
<i>Employment Standards and Rights</i>	
Employment, Health and Safety	LAPFF believes that good, safe employment practices are linked to long-term corporate prosperity and hence the creation of investment value.
Zero Hours Contracts/ Precarious Work	LAPFF considers that there is no clear evidence that companies using zero-hour contracts and precarious work practices outperform companies with different and more inclusive human capital strategies. If used, companies should justify their use to shareholders.
Living Wages	LAPFF supports payment of the living wage as best practice and in corporate engagements addresses the issue on a case-by-case basis, given that the literature indicates human capital policies should work in coordination with one another to be truly effective.
Blacklisting	Companies should not engage in blacklisting under any circumstances.

Corporate Dualism	European-based companies with good track records on employee relations at home should ensure that subsidiaries elsewhere maintain employee relations of an equal standard.
Supply Chain Conditions	Companies should be able to demonstrate that they are upholding and/or facilitating good labour standards in their supply chains through their human capital management programmes.
<i>Human Capital Management</i>	
Staff Training	In addition to disclosing the amount spent on training and development per employee, companies should provide some indication of training topics, how they relate to the promotion of business strategy and growth, and how effective the training was.
Workforce Diversity	LAPFF encourages corporate reporting on a broad range of workforce diversity indicators, including gender, age, work experience, education, tenure, sexual and gender orientation and ethnicity, among other relevant information, as one measure of whether a company has effective problem-solving mechanisms in place.
<i>Human Rights</i>	
Human Rights	Companies are encouraged to adopt human rights policies and management practices in line with the UN Guiding Principles on Business and Human Rights . These policies and practices should be disclosed to shareholders.
Human Rights Expectations of Companies	Companies should be managing human rights impacts, including by ensuring board oversight, engaging affected communities, undertaking impact assessments, acting on those assessments, and assessing the financial materiality of human rights impacts.
<i>Human Capital: Executive Roles</i>	

Executive Search	LAPFF considers companies should publicly advertise all new executive director positions, accompanied by a job specification document, to encourage robust competition for positions and improve the diversity of candidates.
Candidate Recruitment	LAPFF considers companies should provide a transparent and equal opportunity recruitment process and give serious consideration to internal candidates for executive director roles.
Directors' Service Contracts	LAPFF considers companies should fully disclose directors' service contracts, all of which should include a notice period of no longer than one year.
LAPFF'S APPROACH TO ENGAGEMENT	
Developing an Engagement Strategy	In fulfilling its aim of protecting the pensions of members' beneficiaries, the Forum assesses long-term ESG risks and opportunities on a case-by-case basis to determine appropriate shareholder engagement strategies. LAPFF supports the UK Corporate Governance Code, which states that the board should keep in touch with shareholder opinion in whatever ways are most practical and efficient.
Forms of Engagement	LAPFF uses various forms of shareholder engagement including voting, correspondence, one-on-one company meetings, issuing voting alerts, attending AGMs, participation in investor coalitions and submitting shareholder proposals, depending on the response of the company.
Collaboration with other institutional investors	The Forum is committed to collaborating with other institutional investors or investor bodies where this will further the fulfilment of the Forum's aims and mission, but also undertakes its own initiatives where appropriate.
The importance of voting	The Forum believes that voting is a core element of engagement and supports vote declarations prior to AGMs as well as the public disclosure of full shareholder voting records as soon as possible following meetings.

Pooled Funds	Pooled funds should be encouraged to facilitate pro rata voting and to explain publicly if and why they do not.
Escalating the Forum's engagements	LAPFF is committed to escalating engagements where progress is considered too slow or action inadequate.
Shareholder relations	Companies should disclose the share structure, voting rights and any other rights attached to each class of shares.
Engagement with Fund Managers	Trustees should hold fund managers accountable by regularly reviewing their performance and company engagement activities.
Engagement with Asset Owners	The Forum engages with a large number of companies each year. LAPFF considers that the closer company managers are to their underlying asset owners, the more understanding they are likely to generate for their business strategies.
Engagement with Stakeholders	The Forum engages with communities and employee representatives and recognises the important information these stakeholders can provide about investee companies.
Engagement with Public Policy	LAPFF engages with policymakers to promote the highest standards of corporate governance.

2 Governance

2.1 Board of Directors

2.1.1 Board Balance

LAPFF takes a nuanced approach to board balance and considers board size and directors' skills, background and experience when assessing the quality and capacity of the board.

In assessing a company's governance structure, LAPFF will take account of the overall structure of the board in terms of its composition, separation of powers, the relationship between executive and non-executive directors and board committees. Analysis may also focus on those aspects of directors' appointments which can be clearly assessed: the process by which individuals are appointed, their contractual terms, their independence (in the case of non-executives) and the provision of sufficient information to allow a clear judgement on calibre, experience and potential conflicts of interest.

LAPFF's view of the role and composition of a board concurs with the principles set out in the UK Corporate Governance Code. There should be a balance of executive and non-executive directors with broader experience who are in a position to act independently and hold executive management accountable for their actions. The ratio of different types of director is important, as is the overall size of the board. Independent non-executives may find themselves outnumbered and outvoted on large boards where there are many executive directors. Equally, boards with large numbers of directors may become unwieldy. Succession planning and executive pipeline development are viewed as important tools to ensure appropriate board composition, including sufficient diversity.

2.1.2 Board Diversity

LAPFF supports the principle of diversity and encourages boards to select new board members from a diverse pool of candidates.

LAPFF considers this is important principally because it discourages 'group think', which is vital if there is to be effective challenge process. Gender diversity is a necessary but not sufficient attribute to achieve diversity of thinking on a board, thus we believe the case for diversity on boards should not rest on gender alone but should include ethnic and international minorities, socio-economic background as well as on thinking styles, age and experience.

In order to widen the basis of experience on boards and improve their accountability and representativeness, companies should extend their search for non-executives beyond the boards of other listed companies (and thus avoid 'back scratching') to include individuals with a greater diversity of backgrounds. International candidates, those with relevant experience in the public, academic or voluntary sectors, or at divisional level in other companies may well fulfil the remit. LAPFF is a supporter of the 30% Club, an initiative to encourage companies to voluntarily commit to improving boardroom (and executive) diversity by striving to achieve the target of at least 30% women on corporate boards. LAPFF would also like to see companies clearly set out their targets for the percentage of female representatives at the executive committee level and two levels below, as well as disclosure against these targets in order to measure progress against an established time frame. However, LAPFF does not believe that legislation is the best way to create sustainable, meaningful change in this area. Growing the female talent pipeline needs to be high on the agenda for every board.

As part a wider focus on board diversity, LAPFF continues to engage companies on the issue of racial diversity on their boards and supports the principles and objectives expressed in the Parker Review. LAPFF also considers a socio-economically diverse board may help safeguard against group think and poor decision-making.

2.1.3 Independence

LAPFF assesses director independence in accordance with the latest UK Corporate Governance Code (the Code) and additionally on a case-by-case basis.

Independence is determined partly by an individual's character and integrity. These cannot be objectively assessed by shareholders on a consistent basis and are therefore not an appropriate area for written guidelines, although shareholders may, in particular cases, want to address the issue directly with boards.

Outside of a subjective assessment of individual qualities there are a number of criteria identified by the Code which may be assessed in an objective fashion. Certain positions, such as the chair of the audit committee, also require independence of a particular type, in this case from the audited entity. It is LAPFF's view that it is appropriate for shareholders to form their own view of a directors' independence based on these criteria.

2.1.4 Combined Chair/Chief Executive

LAPFF supports the separation of the roles of chair and chief executive in all jurisdictions

The role of the chair is distinct from that of the chief executive. The chair has responsibility for leading the board and for ensuring that the board runs effectively. The chair should also ensure effective communication with shareholders. Placing these responsibilities in the hands of the person responsible for running the company's business can lead to unfettered powers of decision. This arrangement can be particularly problematic in relation to succession planning, as the loss of a joint chair/chief executive can lead to an even greater leadership vacuum at a company than if a dedicated chair or dedicated chief executive were to leave abruptly.

Any company intending to combine these roles must justify its position and satisfy shareholders in advance as to how the dangers inherent in such a combination are to be avoided.

2.1.5 Chief Executive Appointed to Chair

Former chief executives should not be appointed to the position of chair.

LAPFF believes there are inherent dangers in allowing a former chief executive to go on to become chair of the same company. Often comments made by chairs who have previously been chief executives reveal a great deal about how they view their new role, and it is apparent that many have difficulty making the transition to the role of chair and giving up the more immediate strategic decisions that are in the ambit of a chief executive.

2.1.6 Succession Planning

All company boards should have a succession plan, both for the board and for executives, particularly those companies with unique circumstances.

In LAPFF's view, succession planning is unlikely to be universally important to business performance. Numerous studies have shown that when chief executives die unexpectedly stock prices go up rather than collapse. Nonetheless, there are circumstances in which we consider succession planning is likely to have material implications for corporate and stock price performance:

- i. When a company chooses not to comply with the Code and installs an incumbent chief executive as chair.
- ii. When a company has an iconic chief executive.
- iii. When the incumbent chief executive stunts the development of potential successors.
- iv. When the company is experiencing a period of rapid growth.
- v. At a strategic inflection point.

In each case, investors and other stakeholders require sufficient information about a company's succession planning process to be able to determine the degree of business risk (or opportunity) present in the event of a change in chief executive.

Currently disclosure on this subject tends to be restricted to a statement to the effect that a succession plan is in place. In our view this deprives interested parties of the opportunity to make a fully informed qualitative judgement with respect to what can be a critical component of the future direction and performance of the company.

2.1.7 Time Commitments

It is important that directors have sufficient time to devote to the company's affairs. Shareholders will be assured of this if full disclosure is made of directors' other commitments and attendance records of formal board and committee meetings are provided.

LAPFF believes that a focus is required on the time that directors have available to perform their role, and this must logically raise a question about individuals with multiple directorships. The Forum concurs with the Code which suggests that a full-time executive should take on no more than one FTSE100 non-executive position nor the chairship of such a company.

2.1.8 Board Evaluation

The board should undertake a formal and rigorous evaluation of its performance with external facilitation of the process at least every three years, and should include a statement on this evaluation in the corporate governance section of the annual report.

The Forum considers that this reporting should include meaningful, high-level information to assist shareholders' understanding of the main features of the evaluation process. Relevant disclosure in this regard is likely to be found in:

- i. The board's learning from the evaluation.
- ii. The action points arising from the evaluation process.
- iii. Performance against prior action points.
- iv. Evidence that the outcome of board evaluations has been fed back into board planning more broadly.
- v. The extent to which the board has established 'the tone for risk management and internal control and put in place appropriate systems to enable it to meet its responsibilities effectively.'

LAPFF considers that when shareholders get better disclosure on past board performance, they will be better positioned to predict future board performance.

Progress on reporting the critical dynamics created by a board's composition and the nature of the board's functioning as a high-performance team has been slow. We believe this puts a greater onus on boards to evidence how they function as a team, particularly regarding the quality of any challenge process to decisions on major risk and strategic issues. The most likely place for such disclosure is in the board's annual evaluation statement.

2.1.9 Re-election of Directors

LAPFF supports the annual re-election of directors.

Whilst investors will generally want to be supportive of management, there will be instances where governance concerns will result in the desire to oppose the re-election of a given director. The boards of companies where there are not annual re-election requirements should be encouraged to hold annual director re-elections. In practice we do not think this will pose practical problems for companies, and they will not face a challenge unless there are genuine shareholder concerns.

2.1.10 Board Strategy

LAPFF will endeavour to maintain its awareness of any corporate governance or corporate responsibility issues surrounding shareholder approval of relevant corporate actions and strategy.

Decisions taken by directors on strategic or operational issues can clearly have a major impact on the financial interests of institutional shareholders and those beneficiaries to whom they have a fiduciary duty. In relation to ESG issues, even where they are ultimately rejected as having negligible weight (because they have little effect on the relative value of an investment, for example), LAPFF believes they should form part of the basket of considerations to which a decision-maker has regard and on which non-executive directors constructively challenge the board. Risk management and internal control systems are other such considerations. This decision-making process is in line with calls for an effective, fair and just transition to a decarbonised economy.

In deciding on any form of engagement with a company on a strategic issue, LAPFF places the highest priority on optimising the interests of its own members and the interests of its underlying beneficiaries.

Many board decisions on strategic issues become subject to shareholder approval. Examples include specific corporate actions such as takeovers, mergers or capital

reorganisations. They are put to shareholders because, either by law or under listing rules, they are deemed to be of such importance, and to have such significant implications for the rights of shareholders, that shareholders need to specifically approve them.

Compliance with corporate governance best practice will rarely be the decisive factor in arriving at a position on an issue of strategic importance for an investee company. However, LAPFF members expect full information to be provided on the matter, together with an assessment of the likely financial and strategic impact on the company and its stakeholders.

2.1.11 Mergers and Acquisitions

Public pension funds should have oversight of the M&A process to improve the success rate of M&A deals.

The average large company achieves nearly a third of its growth from M&A. In turn, evidence suggests that M&A success and failure (measured in shareholder value creation or destruction) can be largely attributed to the quality of a company's M&A process. Nonetheless, in our experience, companies that employ M&A in their growth strategies rarely provide their shareholders with information that would enable them to judge the quality of their M&A processes ahead of time, or the opportunity to provide feedback on those processes.

2.2 Expectations for Executive Pay

2.2.1 Fixed versus Variable Pay

Ensure that base salary is the primary vehicle for remunerating executives because base salary is, in our view, the up-front negotiated price for doing the job. The variable component of pay should be kept to a minimum for large-cap companies.

We see variable pay as added reward for exceptional performance, not as an expected supplement to the annual wage. Variable payouts that are in excess of the negotiated rate for the job serve to increase pay volatility and create cost uncertainties for shareholders. Placing greater emphasis on the fixed component of pay, in LAPFF's opinion, will reduce complexity and lead to more straightforward and understandable remuneration schemes, both for shareholders *and* for the executives themselves.

2.2.2 Long Term Incentive Plans (LTIPs)

Phase out the use of long-term incentive plans (LTIPs) in favour of company-wide, long-term profit pools that use a straightforward formula for calculating bonuses based on base salary and seniority.

We fail to see the value of LTIPs in motivating people to oversee complex business strategies spanning many years. Success in business is driven by the love of the job, an entrepreneurial spirit, calculated risk taking, and managing expectations. Few executives would admit that if they were paid more, they would perform better, and few would succeed in explaining exactly how their LTIP motivates them to achieve company goals. We lament that LTIPs have been used as a tool to complicate executive pay. As such, we advocate a return to a simpler model of pay based on long-term profits. We recommend that companies endeavour to pay out the bonuses over five or more years to encourage long-term strategic thinking and staff retention by allowing annual profits to accrue in the bonus pool and be paid out in future years.

2.2.3 Quantum of Pay

Assess the quantum of total awards of pay packages in determining what would be considered ‘reasonable’ by shareholders and other stakeholders.

The board, supported by the remuneration committee, should take all existing elements of remuneration into account, including salary, benefits, bonuses, share option awards, long-term incentive schemes, discretionary awards and pension contributions, in order that the actual amount granted is considered as a whole. Quantum should be assessed in terms of the individual’s contribution to long-term value creation for shareholders, as well as in the overall context of ‘reasonableness’.

However, LAPFF does support a binding upper threshold for total annual pay. This is because the Forum believes that many people are motivated by factors other than money, including a desire for challenge, mastery and personal satisfaction. Money is a factor, but it is not the sole determinant of why executives are attracted to a position, nor of why they choose to stay with a firm. Pay practices must take into account other motivations and incentives that drive human behaviour.

In relation to disclosure, the Forum welcomes the idea of making retrospective disclosure of all bonus targets within a specified timeframe a reporting requirement. As these targets are based on past company performance, it is not clear why they would be deemed as materially sensitive. However, increased disclosure of targets does not necessarily mean a greater control over the quantum of executive pay, and therefore when the company deems the actual target to be commercially sensitive, a replacement placeholder scaling (e.g., a percent of target) should be provided to help

shareholders evaluate the level of attainment and gain a greater understanding of final payout percentages.

2.2.4 Pay Inflation

Set the total pay of any new incoming executives (either internally or externally appointed) at a level BELOW that of the outgoing executive.

We question the pervasive practice of awarding new executives with equal or greater pay packages than their predecessors. With any new job, there is a period of learning and adjustment that can last several years. To help address the upward spiral we see in the executive pay market, we think it is appropriate for new executives to have their pay set lower than the outgoing executive. This leaves room for new executives to receive modest pay rises for exceptional performance as they grow into the role and 'prove their worth' to shareholders. It will also help address what we see as ever-greater pay inflation at the executive level.

2.2.5 Pensions

Ensure directors and officers participate in company pension arrangements on the same terms as other employees. Where directors or officers receive preferential treatment the reasons for this should be explained.

We fail to understand the rationale for providing preferential pension arrangements to directors and officers, such as better accrual rates in DB schemes, or contribution rates in DC schemes. Together with National Association of Pension Funds, the predecessor body of the Pensions and Lifetime Savings Association, LAPFF issued guidance to companies on best practice disclosure of pension entitlements. Ideally, all employees of the company should receive fair and reasonable pensions in line with their tenure of service.

2.2.6 Environmental and Social Performance

Clawback bonuses and variable pay in cases where ethical standards are breached, or where poor environmental or social performance causes demonstrable harm to the company's reputation or social license to operate.

We do not believe it prudent to award executives for making decisions to increase profits if it means the company's ethical conduct or reputation will be severely damaged in the process. Such short-term thinking can be value-destroying and is another form of 'reward for failure.' In order to reinforce expectations regarding long-term, sustainable growth in line with company standards and ethics, we think clawbacks should be used upon the discretion of the remuneration committee and in consultation with shareholders.

2.2.7 Performance Conditions

Align executive pay performance conditions with business strategy and the key performance indicators of the firm. Refrain from relying on earnings per share (EPS) and total shareholder return metrics (TSR) particularly when those metrics are adjusted to exclude discretionary exceptional items.

We are not convinced that EPS and relative TSR are good measures of performance for the purpose of pay, as they are open to market distortion and are poor measures of actual performance. We find it particularly concerning when companies inappropriately adjust these measures to exclude certain exceptional items that formed part of the fundamental business decisions in the year. We view such adjustments as misleading and adding to the complexity of pay schemes. We advocate that if companies choose performance metrics that these be well-aligned to the fundamental objectives of the business and that executives themselves understand and can influence in their day-to-day tasks.

2.2.8 Performance and Payout Periods

Set performance periods according to a timeframe of three or more years and reflects the company's own business cycle. Pay out awards over a period of five or more years.

LAPFF prefers performance periods stretching from five or ten years in order to align executives with the long-term view. LAPFF supports the five-year minimum holding period of awards, with a preference for ten years.

LAPFF considers decisions taken by executives today may have repercussions for companies many years into the future. Investors should be assured that executives have 'skin in the game' and share in both the cost and benefits of their decisions over the long-term. As such, we recommend executives invest their own money and use their annual scheme to achieve the minimum requirement within five years of their appointment. We do not consider that unvested shares or unexercised options should be used to achieve the requirement.

2.2.9 Pay Benchmarks

Discourage the use of market benchmarks for determining the comparative pay levels for executives.

We consider there is a false market for executives, due to the small and homogenous pool of candidates whose current pay packages (as a group) are inflated to begin with. Benchmarks serve to simply justify current levels of pay based on this false

market. In addition, high rewards at one company can inflate pay within the peer group, regardless of each company's fundamental performance.

2.2.10 Pay Ratios

Publish annually the ratio between average employee pay and average executive pay, as well as the ratio of pay between the top and bottom 10%. Provide a graph charting the pay ratio trends for the current year and the preceding five years.

We want companies to create a shared vision of growth and success in collaboration with employees at all levels. However, we are concerned that the growing gap between pay at the top and everyone else can undermine morale and motivation in the workforce. We do not advocate that companies set an upward limit on the ratio of executive pay to average employee pay, but we believe the publication of these ratios on a yearly basis will make the remuneration committee more accountable for making appropriate pay distributions. LAPFF would like to see annual publication of the ratio between average employee pay and average executive pay, as well as the ratio of pay between the top and bottom 10% and the provision of a graph charting the pay ratio trends for the current year and the preceding five years. To counteract the 'misleading interpretation' of the ratio, companies are encouraged to explain the methodology for calculating the ratio, giving reference to sector pay averages and ratios as part of their rationale. In this regard, LAPFF welcomed UK disclosure requirements for companies with more than 250 employees to disclose the ratio between the chief executive's pay and the average UK employee.

2.2.11 Tax Planning

Ensure that efficient tax planning remains in line with the company's ethical and corporate responsibility standards. Refrain from using creative tax planning to increase executive pay.

We recognise that efficient tax planning is an important part of cost management. However, pay policy changes should not be solely driven by tax planning, nor should the timing of awards be driven by expected tax advantages. Tax revenues are essential for maintaining the social infrastructure on which companies rely. Therefore tax planning, both generally and in terms of executive pay, should not be carried out in a way that threatens the company's reputation or is misaligned with internal corporate responsibility or ethical guidelines.

2.2.12 Golden Hellos, Handcuffs and Parachutes

Discontinue the practice of paying ‘golden hellos’, ‘golden handcuffs’ and ‘golden parachutes’, regardless of the individual circumstances of incoming executive directors.

We do not accept the prevailing view in the executive pay debate that money is the best motivator for executives. We want our chief executives and executive directors to work hard and be motivated by the challenge and mastery that comes with the job, not by the pay package they expect to receive. We believe that companies that can demonstrate a compelling ‘employee value proposition’ will be more successful at recruiting, motivating and retaining the right kind of staff. Companies should compete for staff on this basis, not on the basis of the pay package alone. As such, we believe the payment of golden hellos to entice executives into new positions to be wholly inappropriate. The practice of golden handcuff arrangements can also make it difficult for companies to attract talented people on reasonable terms. Replacement awards with strict performance conditions linked to the long-term, sustainable performance of the company may be acceptable in certain circumstances and will be evaluated on a case-by-case basis.

2.2.13 Investor Consultation

Proactively consult with institutional investors that hold long-term positions in the firm regarding their views on the company’s pay practices. Endeavour to consult with both large and small shareholders; and, in particular, with those that may take a critical view.

As shareholders with an active interest in the companies we own, we believe companies should make their best efforts to consult with investors on their pay policies and practices. Only through meaningful dialogue with large and small shareholders in open forum, can the remuneration committee ensure that pay is both appropriate, and in line with shareholder expectations. We would particularly encourage outreach to investors that may take a critical view of remuneration, and for transcripts of the discussion to be made available to all shareholders. To this end, the Forum welcomes the mandatory disclosure of fund managers’ voting records and encourages a specific period for disclosure of voting records, in order that investors are informed in a timely manner of how their votes have been casted. We would also encourage an annual binding vote on variable executive remuneration. This would include a binding upper threshold for total annual pay.

2.2.14 Employee Views on Remuneration

Consider and include the views and recommendations of managers and employees when making remuneration decisions.

In our view, the issue of executive pay is not solely the purview of the remuneration committee. Decisions made about pay at senior levels affect the rest of the organisation; both in terms of influencing the availability of capital to be distributed elsewhere (dividends, reinvestment, employee pay and bonuses), and the motivation and productivity of middle-management and junior employees. We therefore believe that incorporating the views of employees is critical when setting executive pay, including pay policies. We strongly encourage companies to consider having employee representation on the remuneration committee, or formally canvassing employee views through surveys or separate advisory committees. In all cases we would encourage the company to implement a formal process to feed these views back into the deliberation of the remuneration committee, and to report back to shareholders on how the committee considered those views.

2.2.15 Discretion

Use discretion in executive remuneration ONLY to reduce overall levels of remuneration. Refrain from awarding transaction-related bonuses.

We acknowledge that there is not a 'one size fits all' approach to pay. We expect companies to follow due process to arrive at their decisions on setting executive pay. At no time do we think it appropriate for remuneration committees to use discretion to increase levels of pay. We do think it appropriate that discretion is used to decrease pay based on poor financial or environmental and social performance. Nor do we think it appropriate to award executives for overseeing transaction-related bonuses, such as mergers and acquisitions, as we see this to be a normal function of the job.

2.3 Audit and accounts

2.3.1 Accounts and Reporting

Accounting and reporting should be clear and transparent, in line with the legal requirement of true and fair view as set out in the 2006 Companies Act, with the numbers presented in a way that captures all material financial issues, including relevant environmental and social issues and risks; with special attention to the short and long term aspects of trading as a going concern. Issues with the ethics of large accounting firms are also key, with an increasing number of scandals where dishonesty of auditors is a factor – rather than 'merely' negligence or incompetence.

Proper accounts and reporting are fundamental elements of accountability to shareholders and reinforce control by shareholder collectively based on appropriate information. Proper accounts also enable directors and auditors to discharge their statutory functions, which includes proper profits and nets assets not only for a capital maintenance function, but also as a precursor to that, being able to make a proper going concern assessment. It is particularly important to distinguish between the different elements of an annual report to demarcate responsibilities. The accounts are audited and carry joint and several responsibilities between the auditors and directors – which is giving assurance on the financial integrity of the business. Other parts of the annual report are under the responsibility of the directors alone. The term ‘financial reporting’ is potentially blurring responsibilities.

LAPFF robustly supports the principle that the accounts are addressed to the shareholders for the benefit of the shareholders and creditors, and for the proper conduct of the AGM, which includes approving the dividend (which must be lawful by reference to the numbers in the accounts), reappointing the directors, and assenting to their remuneration.

LAPFF robustly upholds the going concern basis of preparing accounts. The shareholder residue is likely to be very different on a going concern compared to an ongoing concern basis. LAPFF recognises significant problems with International Financial Reporting Standards (IFRS) in this regard.

LAPFF considers that a company’s long-term financial success can only be achieved on a sustainable basis. Directors should identify their key stakeholders, develop appropriate policies for managing relationships with them and they should report on and be held accountable for the quality of these relationships since they are an important component of a company’s long-term strategy and competitive position.

2.3.2 Financial Reporting Standards and Oversight

LAPFF believes that the legal framework is sound. A problem with the current lack of confidence in auditors and their work is that the accounting standards and the body providing oversight do not fit with it. LAPFF has taken an independent opinion from George Bompas QC, who identifies particular problems in reconciling the accounting standards with the true and fair view requirement of the law, and the legislative requirement to distinguish distributable reserves (real profits and real net assets) and transient paper ones.

This gives rise to significant financial governance and monitoring problems. Pay may be miscalculated as a matter of course, companies may be paying unlawful dividends

and in addition to reporting financial performance, companies should consider providing additional information on a range of issues that also reflect the directors' stewardship of the company in respect of all stakeholders. These issues include information on a company's commitment to employees, to society and to its impact on the environment in which it operates.

The treasury select committee described the position of the FRC as 'inexplicable as it is unacceptable'. LAPFF has long called for Downing Street to take an active interest in the position of the FRC and welcomed the announcement of the establishment of the Auditing Reporting and Governance Authority (ARGA). However, aspects of ARGA, including the UK Endorsement Board – which approves IFRS now that the UK is no longer covered by EU endorsement – carry significant signs of a reversion to the bad aspects of the FRC.

2.3.3 Audit Committee Report

Companies should prepare a risk report as part of their audit committee report to shareholders, which should be subject to an annual shareholder vote.

In addition to encouraging non-financial reporting by companies, LAPFF would also encourage investors and their advisers to properly consider the risk disclosures made by companies before approving them. This report should also disclose the scope of the external auditors' report, which should address risks of material misstatement, materiality and a summary of audit scope. Risks should also include ESG factors and how these factors affect financial performance.

2.3.4 Tax Report

Companies should report fully on their tax strategies and payments, including a country-by-country breakdown of tax payments in each jurisdiction in which they operate.

The Forum supports modernisation and reform of international taxation rules and structures as part of ongoing measures to reform tax practices improve the resilience of global financial systems as recommended by the OECD and G20.

Companies should be transparent and report fully on their tax strategies, risks and payments, including a country-by-country breakdown of tax payments in each jurisdiction in which they operate.

While LAPFF appreciates that responsible, efficient tax planning is appropriate for companies and is supported by investors, aggressive tax planning can be viewed as both a reputational and operational risk for companies. It is helpful for investors to

understand company taxation practices and strategies to assist asset owners to undertake their own investment governance, risk management and due diligence obligations, vital to carrying out our fiduciary duties.

The OECD Base Erosion and Profit Shifting (BEPS) Action Plan is supported in seeking reform and improved international tax practices that will benefit companies, regulators and investors. Accordingly, LAPFF supports adoption of the Action Plan by regulators and implementation in both spirit and practice by companies.

2.3.5 Internal Controls

It is the board's responsibility to set and fully disclose the company's internal control policies. However, it is essential that these do not shift responsibility from those controls already needed to provide an opinion under audit that the accounts give a true and fair view

LAPFF holds that 'a sound system of internal control contributes to safeguarding the shareholders' investment and the company's assets'. Communications with shareowners will benefit where companies decide to go beyond the basic requirements and identify the significant areas of risk and how the company manages these. These risk areas should not be limited to financial issues. Overall, the going concern position is sensitive to various parts of the business model including the overall degree of financial and business control. Fundamentally the correct going concern position does not flow from merely listing risks, but assessing their impact properly. To this end, it is important to ensure whistle-blower protection is in place so that '[w]histle-blowers can bring new information to the attention of competent authorities which may assist them in detecting and imposing sanctions for irregularities, including fraud.'

2.3.6 External Auditors and Non-Audit Services

The external auditor should be fully independent and should not undertake non-audit work, as this might compromise their independence.

The Forum considers that the independence of the auditor is of most importance to shareholders, both in respect of individual companies and in terms of audit's public policy function of ensuring investor confidence in financial reporting.

LAPFF considers that:

- There is a conflict of interest for auditors providing non-audit services to companies for which they provide audit services.
- A conflict of interest occurs when the auditor provides consultancy services for the management at the same time as it undertakes an audit on behalf of

the shareholders. The auditor in this case cannot be truly independent from the management since other commercial interests can compromise auditors in their ability to confront directors on difficult issues.

- The current ethical guidance on objectivity within the auditing profession is not sufficient to prevent significant concern being raised.

LAPFF's view is that companies should disclose in the audit committee report the policy for awarding non-audit services to auditors. We do not consider it sufficient simply for the committee to disclose that the company has a policy on non-audit work; the practicalities surrounding the awarding of it should also be disclosed. Therefore, this policy should identify which non-audit services the external auditors are prohibited from providing, the process by which other non-audit services are approved, the broad nature of the non-audit work and specific details of the nature of the work to be undertaken.

We consider that an auditor that undertakes the statutory audit for a company should only perform this duty and those other services supplied pursuant to legislation. Other professionals should undertake all other non-audit work. Among the current non-audit services auditors currently undertake, we consider taxation and tax advice to be potentially one of the most controversial ones given the scope for reputation risk. In addition, we consider a company's auditors should not undertake internal audit functions for the same company they audit.

2.4 Corporate Responsibility Reporting

2.4.1 Non-Financial Disclosure

LAPFF encourages companies to describe how their corporate responsibility and sustainability policies align with and support the long-term corporate strategy.

We caution against the approach used by some reporting companies, which appears to us to have become an annual restatement of boilerplate text relating to generic, rather than company-specific risks, opportunities, and activities. The Forum considers that the strategic report requirements are important in providing the most useful disclosure, including ESG disclosure, for shareholders.

LAPFF considers reporting could still be improved in relation to:

- Capital allocation: we believe the process by which a board allocates capital, including the trade-offs it makes between competing projects and

stakeholders, is critical to a shareholder's understanding of a company's ability to create value and its orientation to stakeholders and should be disclosed at a level of detail not seriously prejudicial to the company.

- Employee engagement: the level of employee engagement in a company is often a determining factor in company performance. Nonetheless, whilst there is a great deal of (boilerplate) reporting on how companies attract and retain staff there is very little (almost no) discussion of the policies, process and cultural factors companies use to motivate people to perform.
- ESG and human rights contribution to strategy and performance: although a substantial proportion of companies refer to ESG and human rights matters in setting out their strategy, few companies comment on how their ESG and human rights performance contributes to this strategy according to our definition of the term and further make the consequent significant link to performance.

LAPFF wishes to see reporting on material information in the annual report and believes that the inclusion of immaterial and duplicate information can detract from clear messaging. Improved reporting on linkages between information presented and business performance is also welcome.

2.4.2 Non-financial Incentives

Companies should endeavour to develop and report how non-financial incentives and reward systems help attract, motivate and retain staff.

Most executives report being driven by non-monetary rewards including a sense of achievement, of being part of a successful management team, of working in a place where they are in tune with the organisation's values and objectives, and of building a great company. These themes recur in most studies of employee motivation and engagement. It is widely acknowledged that senior executives have their own motivation calculus, their own set of needs and desired results and that, to most, money is simply a form of calibration, or a way by which senior executives compare themselves with their peers.

Equally, it has been found that the companies that most effectively motivate their employees to pursue future growth and concentrate on current performance take care to supplement financial rewards with unusually inclusive and motivating corporate cultures. At a company of this kind, employees see a close fit between its long-term interests and their own. Consequently, they are better motivated to work diligently and creatively to serve the business well. In such companies, the culture and incentive schemes serve to reinforce each other.

Nevertheless, it is uncommon for a company to report extensively on how it uses non-monetary reward systems to attract and retain staff, to motivate them to perform or indeed to align their interests with the interests of shareholders by motivating them to deliver long-term business success. We consider this a material omission and, if addressed, would significantly help stakeholders appraise the quality of a company's organisational capital.

2.5 Lobbying

2.5.1 Political Donations

LAPFF assesses the issue of political donations on a case-by-case basis.

LAPFF has general concerns over the reputational risks and democratic implications of companies becoming involved in funding the political process. However, we recognise that it may be appropriate for companies to fund business associations or groups whose activities have a direct benefit to the company, or to undertake other funding that may fall within the ambit of political parties, elections and referendums laws. We recognise that UK law relating to the disclosure and authorisation of political funding is currently subject to varied interpretations. Whilst legal compliance is of course a requirement for companies, LAPFF will critically assess company proposals, especially decisions to fund SuperPACs in the United States. The Forum will also assess whether any donations significantly contradict, in both the importance of the issue and degree of divergence, the public statements by the company.

2.5.2 Industry associations and lobbying

LAPFF expects that companies do not misuse their membership of industry associations to lobby for public policy reforms which contradict their public statements and public company position on an issue.

As such, LAPFF expects companies to regularly review their membership of industry organisations and remain up to date with what is being said and done in their name, so as to be able to act when appropriate. To do so, companies should consider:

- Reviewing and discussing membership at the board level, including when the company is about to join an organisation and regularly reviewing existing membership of industry groups.
- Undertaking, disclosing and acting on a specific review of membership of industry organisations as well their own public policy advocacy work, to assess and ensure the alignment with stated policy commitments made to shareholders.

- Having and disclosing criteria for discontinuing membership of an industry association and for distancing the company from statements from industry organisations which diverge considerably from their own.
- Using their influence within the industry organisation to change its policies where there is misalignment.

3 Environment

3.1 Climate change

LAPFF has long recognised the imperative to address climate change as a systemic and long-term investment concern for members, as it poses material financial risks across all asset classes with the potential for loss of shareholder value.

The 2015 Paris Agreement set out a global framework to avoid dangerous climate change by limiting global warming to well below 2°C and pursuing efforts to limit it to 1.5°C.

In 2021, the World Meteorological Association noted the world has already reached 1.2°C of warming. The 2021 IPCC report set out that, for an 83% chance of remaining within 1.5°C of warming, the global carbon budget will be used up by 2027 at the then emissions rate.

The Forum's policies seek both to reduce the overall financial risks associated with climate change and the risks individual companies face within a shifting regulatory and consumer environment.

3.1.1 Carbon Emissions Reporting

The Forum strongly supports the introduction of mandatory carbon emission reporting in all jurisdictions.

The Forum considers that corporate carbon emission reporting should be made mandatory in all jurisdictions. This could be put into effect by integrating appropriate requirements into individual stock exchange listing requirements.

LAPFF considers that a single global reporting framework is essential in the context of initiatives seeking a consensus on global action required to tackle climate change. Companies should use international accounting tools for clarity and comparability in reporting carbon emissions, specifically the Greenhouse Gas Protocol Corporate Accounting and Reporting Standard. In determining boundaries for reporting, the 'financial control' approach should be taken, as this is the best way to ensure comparability and consistency. When reporting, companies should disclose absolute emissions and use emission intensity indicators as the latter enables better year-on-year comparison if a company is growing or shrinking. Companies should also disclose their direct and indirect emissions (Scopes 1, 2 and 3) to fully account for their environmental impact and so investors can understand the risks associated with both their operations and products and services.

3.1.2 Carbon Risk Reporting

The Forum strongly supports the introduction of mandatory carbon risk reporting.

LAPFF [supports](#) the recommendations of the Financial Stability Board's Task Force on Climate-related Financial Disclosures report and considers that all market participants should be encouraged to aim for the fullest relevant implementation. The Forum has long promoted mandatory climate risk reporting, the mechanism for which is already in place under the Companies Act requirements for companies to report financially material risks in the annual report. LAPFF also considers that in positioning themselves for the required decarbonised future, companies should disclose a transition plan.

3.1.3 Carbon Risk Management and Business Strategy

LAPFF considers that companies should report on their approach to carbon risk in the context of how they are factoring the management of climate change into their business strategy in line with a fair and just transition to a decarbonised economy.

The Forum's engagement strategy is to ask companies to identify and tackle carbon risks in their business models and the concurrent opportunities. LAPFF will continue to press companies on aligning their business models with a 1.5° C scenario and to push for an orderly transition.

LAPFF considers it important that there is certainty around international objectives regarding managing systemic climate disruptive risks and a crucial element of this is encouraging emission reduction through effective legislation. With the provision of a clearly identified legislative framework on carbon reductions, companies will be able to make the necessary decisions and financial commitments to provide the short- and long-term solutions to decarbonising the economy that are needed.

The Forum recognises the issue of stranded assets and continued fossil fuel extraction as a collective investment risk for all asset owners and as an engagement and policy priority. LAPFF considers there is an economic and financial justification for moving away from investment in coal, oil and gas, and promotes a managed decline. For oil and gas companies, the focus should be on value at risk, particularly from high-cost projects and support can be given to returning capital to investors where appropriate. For companies with coal operations, no new resources should be exploited. In positioning themselves for the required zero carbon future, companies should disclose a transition plan.

LAPFF members are supportive of investment opportunities afforded by a decarbonised future which increases diversification and provides long-term returns.

3.1.4 Targets

LAPFF expects companies to provide information to investors on carbon management. This should include disclosure of Scopes 1, 2 and 3 emissions with targets aligned with a 1.5°C scenario. LAPFF expects business plans and strategies to be aligned with a 1.5°C scenario. As such, LAPFF expects companies to set clear emission reduction targets that meet that ambition. This will enable investors to understand the path to zero-carbon and hold companies to account for their performance.

These targets should cover Scopes 1, 2 and 3 emissions to fully account for a company's climate impacts and material risks. LAPFF also expects companies to set interim emission reduction targets. Interim targets help investors to understand the decarbonisation path a company is pursuing and enable investors to hold companies to account in the shorter term. Interim targets are important when assessing whether a company is aligned with limiting global warming to 1.5°C. As the Intergovernmental Panel on Climate Change report found in 2021, 500bn tonnes more of carbon emissions from human activity would leave only a 50% chance of staying under 1.5°C.¹ Delaying reductions, even while setting a longer-term target, increases the risks of breaching that carbon budget and not being Paris aligned.

3.1.5 Focus on Reductions not Carbon Capture or Offsetting

LAPFF considers that companies should be focused on actual emission reductions and not heavily reliant on carbon capture or offsetting.

Using voluntary offsets for avoidable emissions rather than taking the route of more substantial decarbonisation creates considerable investment and environmental risk.

There are reasons to limit reliance on early-stage technologies, such as Carbon Capture and Storage, for which future rates of deployment are highly uncertain: that is why the SDS [Sustainable Development Scenario] emphasises the importance of early action on reducing emissions.

The position that Carbon Capture technology is an option rather than a route to meeting the Paris commitments would appear to be a prudent one.

¹ IPCC, Summary for Policymakers. In: Climate Change 2021: The Physical Science Basis. Contribution of Working Group I to the Sixth Assessment Report of the Intergovernmental Panel on Climate Change (2021)

LAPFF is alert to an over-emphasis by oil and gas producers on 1) solutions that do not occur until after 2050, 2) the fact that existing technology has not been developed so far to any scale that would materially help achieve Paris goals, 3) the cost of carbon capture itself includes energy inputs. Where oil and gas companies are relying on carbon capture (Carbon Capture and Storage and Carbon Dioxide Removal) and carbon sinks (e.g., afforestation) in achieving net emissions, it is essential that there is transparency on the contribution of those to achieving those net emission reductions.

In addition, technologies such as Direct Air Capture risk contributing very little to becoming net zero, even by 2050, and in the process risk keeping fossil fuel extraction and consumption higher than necessary. Any claims to be using or relying on DAC should be considered very carefully and the credibility of a company's decarbonisation plans should be tested against any claims to use DAC.

With nature-based solutions being asserted as necessary for difficult to abate sectors, there is the risk of displacement of the opportunity for the latter given that offset capacity is finite. LAPFF considers that the definition of what sectors are 'difficult to abate' should have strict parameters and be subject to scrutiny and challenge, ideally through an annual review process. In sectors once considered hard to abate technology has now been developed to reduce emissions. As such, LAPFF supports a clear legislative framework for carbon reductions.

LAPFF is against companies superficially using offsets. For example, the effect of tree planting in one area (for offset/subsidy) has been replaced by deforestation elsewhere. As such, emissions are not actually offset. Use of such offsetting also comes with ecological and community risks that need to be addressed for any offsets project.

3.1.6 Just Transition

LAPFF considers that transition to a decarbonised economy needs to be achieved in and fair and just way, and that companies should have in place credible just transition plans.

A just transition seeks to ensure that the benefits of a shift to a decarbonised economy are shared and maximised, while supporting those most impacted by the change and mitigating the negative effects. The social dimension of a just transition covers workers, consumers, supply chains and communities in the UK and globally. A just transition is about both the process and the outcome, including engaging and involving stakeholders and seeking a planned and orderly transition.

LAPFF considers a just transition a financially material issue. If the transition is viewed as unfair and unjust then there is likely to be public resistance to climate action. Therefore, ensuring a just transition will support the overall objective of decarbonising the economy while also delivering wider benefits.

Given the material risks of an unfair transition, LAPFF expects that companies have a clear and credible just transition strategy.

These plans should include the scale and where the risks lie (including for consumers, communities, workers, and supply chains), having a strategy to effectively manage the risks and opportunities, setting out their approaches to engaging and supporting the main affected stakeholders, disclosing their engagement with policymakers, and reporting their current position and progress against targets.

Such plans and strategies should include specific details around delivering good jobs and decent work, reskilling and retraining; looking beyond directly employed staff and supporting suppliers in the transition; applying labour, human rights and environmental due diligence policies and assessments to the supply chain; engaging local communities; and supporting vulnerable consumers.

3.1.7 Chair or Chief Executive Responsibility

LAPFF expects the chair or chief executive to have responsibility for the climate strategy.

The investment risks and opportunities of climate change are such that LAPFF considers responsibility should lie with the chief executive or chair. This will help provide adequate oversight of the climate change plan and implementation. Doing so will help ensure the issue is a priority and those at the very top of the company are ultimately accountable. Being able to identify the director responsible also enables investors to determine who to engage and potentially vote against when the company's plans and actions are insufficient.

3.1.8 Annual Say on Climate

LAPFF supports the principle of a 'Say on Climate' and encourages all listed companies to submit a Climate Transition Action Plan to a shareholder vote at their AGMs.

Companies' failure to manage climate risk presents a significant threat to shareholder value. LAPFF believes filing resolutions at a limited number of companies with a high carbon impact is no longer enough. All listed companies need to present a clear strategy for reducing their entire carbon footprint (across Scopes 1, 2 and 3) on which investors can vote annually at each AGM.

LAPFF considers that asset owners and managers should incorporate 'Say on Climate' into their investment and voting policies, and where investee companies do not voluntarily put an action plan to shareholders for approval, consider filing or co-filing 'Say on Climate' resolutions. LAPFF endorses advocating for a mandatory 'Say on Climate' which would mean that regulation would ensure this opportunity would be on every listed company AGM ballot.

3.1.9 Climate Change Investment Policy

Members are encouraged to consider climate change issues across the Fund and in investment policies.

LAPFF has proposed the following text for members to consider, including within their fund's investment beliefs statement: 'The board and management of the pension fund consider that over the expected lifetime of the fund, climate-related risks and opportunities will be financially material to the performance of the scheme's assets. As such, under our fiduciary duties we will consider climate change issues across the fund and specifically in areas such as strategic asset allocation, investment strategy, investment manager selection and risk management with the aim of minimising adverse financial impacts and maximising the opportunities for long term economic returns on our assets.'

3.2 Sustainable Development Goals (SDGs)

LAPFF supports the alignment of SDGs with responsible investment strategies, including a just transition to a decarbonised economy.

The SDGs are part of the UN's 2030 Sustainable Development Agenda, a multi-stakeholder action plan aimed at tackling global challenges such as climate change, poverty, inequality and corruption. LAPFF believes that incorporating SDGs in investment decisions and strategies benefits funds and has a positive impact on the economy in which funds operate. Consideration of SDGs in investment policies and engagement can therefore help protect the interests of beneficiaries.

3.2.1 Water and Sanitation

The Forum strongly encourages companies to consider water and sanitation in their business strategies.

LAPFF considers companies should have effective initiatives to address water efficiency, reduction of water consumption and waste, and elimination of contamination, as well as adequate human rights due diligence processes to assess whether appropriate water and sanitary facilities are provided. This in alignment with SDG Goal 6 on Water and Sanitation.

3.2.2 Sustainable Cities and Communities

Companies should consider rapid urbanisation and ensure that their business models contribute to a more inclusive, safe, resilient and sustainable cities and communities.

Businesses can play a vital role in achieving sustainable cities and communities (SDG Goal 11) as they can provide the specific infrastructure, technology, services and financial solutions as well as contribute to the planning and development process. Business strategies should include initiatives for providing access to safe, affordable, accessible and sustainable transport systems for all; enhancing inclusive and sustainable urbanisation and capacity for human settlement planning and management; and reducing the adverse per capita environmental impact of cities.

3.3 Environmental risks

3.3.1 Deforestation

LAPFF expects companies to have appropriate policies and practices to manage the risks associated with deforestation.

Given the important role forests play from both an environmental and social perspective, ensuring appropriate measures are being taken to sustain and protect these dwindling natural assets should form a significant part of any responsible investment policy. LAPFF recognises the crucial role the world's forests play in absorbing and storing carbon, sustaining ecosystems and providing a livelihood and natural resources for resident communities the world over. LAPFF further recognises the responsibility that companies and investors have in the sustainable management of the world's forests in the attempt to mitigate the impacts of climate change.

Agricultural commodity production is one of the major causes of deforestation globally. Four of the larger resources responsible being beef, soy, paper and palm oil. Whilst deforestation remains a global issue, the problem is particularly prevalent in the commodity rich but weak regulatory environment of the Amazon basin.

LAPFF recognises the investment risks associated with deforestation and failing to adopt adequately robust policies that are capable of penetrating the supply chains to the extent required to address unsustainable and illegal logging. These risks include regulatory, legal and reputational that may occur if the company's value chain is implicated in, or associated with, the illicit timber trade and the physical risks associated with diminishing productivity on land claimed as a result of deforestation due to nutrient poor loam and topsoil erosion. This can in turn lead to write downs

and assets becoming stranded. LAPFF supports the aim of the sustainable development goals (SDGs) including Goal 15 (life on land) which seeks to preserve the biodiversity of forests, restore degraded forests and protect the habitat of endangered species. For market participants whose value chain is reliant on forest products, LAPFF expects to see disclosure of the risks posed by deforestation included as standard. To ensure investor and consumer confidence, LAPFF encourages companies whose value chain is reliant on the use forest products to adopt the relevant policies that ensure the entire lifecycle of its product is certified by the Forest Stewardship Council (FSC) or the Programme for the Endorsement of Forest Certification (PEFC).

3.3.2 Water and Business Strategy

LAPFF considers that companies should report on their approach to use and protection of water resources in relation to their business strategies.

Given the current threat to water resources, arguably linked to carbon risks, LAPFF considers it important for companies to report on their water use so that investors can understand how this use affects the environment and can be sure that the resources are being used in a way that sustains business models and operations.

4 Social issues

LAPFF considers social risk every bit as important as environment and governance risk to long-term shareholder returns. According to many annual disclosures employees are a company's 'greatest asset'. However, policy and practice can fall short of annual report rhetoric and sentiment, presenting significant risks to investors. These risks have long been recognised by LAPFF and are a focus of its policy focus for engagements. Equally, human rights breaches and social issues impacting communities pose significant investment risks. Often overlooked by companies and investors, LAPFF actively seeks to address such concerns.

The nature of the risk can differ from environmental and governance concerns in that its assessment is highly reliant on qualitative, rather than quantitative, indicators. Therefore, the Forum engages in an innovative process of speaking directly to affected workers and communities to identify and address social risk.

4.1 LAPFF approach

4.1.1 Stakeholder Engagement

It is LAPFF's view that evidence of effective stakeholder engagement by a company, including initiatives such as grievance mechanisms and other efforts to amass and integrate employee and broader stakeholder feedback into how the company operates, will enhance shareholder value both by addressing risks early and by tapping into innovative ideas for growth. This engagement is also likely to facilitate a just transition to a decarbonised economy.

LAPFF is well-placed to meet the call for investors to engage with companies to determine appropriate social indicators and reporting methods. The Forum specifically favours constructive dialogue with companies in the interest of ensuring that companies are delivering long-term shareholder value. This style of engagement is conducive to working with companies to tease out indicators meaningful to both companies and investors and to ensure that quantitative indicators are couched in appropriate qualitative narratives. Additionally, LAPFF believes that appointing individual stakeholder representatives to company boards is a good avenue to improve stakeholder engagement. Nomination committees should aim to select directors with a wide range of experience and expertise relevant to the business

However, LAPFF's view more specifically is that stakeholder engagement, done well, is an effective way for companies to gather important data about social risks, human capital practices and how employees view their contributions to driving company performance and value. The literature suggests that employee engagement is a

crucial element of human capital management, and LAPFF's position is that stakeholder engagement more broadly is an important indicator of a company's willingness to learn and integrate feedback from both internal and external experiences.

LAPFF is in principle in favour of board level employee representation as it can offer a new perspective and be an important check and balance to board discussions and decision-making, adding both a longer-term perspective and a link to the social context in which the business is operating. LAPFF believes if there is to be effective representation, board level employee or stakeholder representation should not simply be about engagement but also participation. As such, the Forum considers the option in the UK governance code for specific employee or stakeholder panels running in parallel to the board is too weak. Instead, the Forum favours either designating existing non-executive directors to represent employees or appointing stakeholder representations to company boards. The Forum also believes reporting requirements related to stakeholder engagement should be strengthened.

LAPFF also considers that senior independent directors (SIDs) should be recruited in part based on evidence of their ability to work effectively with stakeholders. Having the SID sit on all three main committees – audit, remuneration and nominations – might also help to ensure that there is a joined-up approach to integrating stakeholder considerations. The SID could then write a segment or segments for the annual report outlining how the relevant committees account for stakeholder perspectives in their decision-making. This could include objective-setting and reporting on how objectives have been achieved or not achieved, as the case may be.

LAPFF further considers that the work of any stakeholder committee should be integrated into the audit and risk committees' work so that the two areas function in a joined-up manner and as a strategy and business model consideration.

4.1.2 Quantitative versus Qualitative Reporting

LAPFF supports the call for narrative reporting that includes both quantitative and qualitative indicators, but does so in a way that conveys a meaningful description of how human capital contributes to the long-term value of the company.

The lack of appropriate metrics to assess a company's social impact and human capital management, as well as a lack of investor knowledge about how to use such information, is a large hurdle to effective reporting in this area. A slew of metrics have been proposed by a range of organisations but few seem as yet to have gained much traction within corporate practices.

The literature, for example, suggests that a link between human capital management and business model and strategy is a key element of reporting, but it also appears that investors have backed down from proposing specific metrics and indicators. One observation is that while there has been a call for a mixture of quantitative and qualitative reporting on human capital management and other social issues, the concrete indicators proposed thus far often fall into the quantitative category.

While quantitative reporting is undoubtedly important, it is notoriously difficult to quantify social impacts in a meaningful way. A list of targets and numbers is often meaningless without a qualitative context or explanation for the quantitative indicators. Therefore, quantitative information needs to be connected up with qualitative reporting in a meaningful way so that investors can understand how a company's approach to employment standards, human rights and human capital management is creating value.

4.2 Employment standards and rights

4.2.1 Employment, Health and Safety

LAPFF believes that good employment practices are linked to long-term corporate prosperity and hence the creation of investment value.

The Forum is committed to improving the quality of employment reporting by listed companies and has set out a range of core indicators of good practice that companies should disclose.

On health, safety and risk management, many companies appear to pay more attention to health and safety, and risk management outcomes than they do to the quality of the business processes that underpin these. Companies therefore routinely disclose health and safety, and risk management outcomes without commenting on the quality of the business processes that underpin them (except for the usual boilerplate). We believe this gives rise to the possibility that companies become complacent (for example, as outcome data improves even when processes are deteriorating), and deprives stakeholders of the opportunity to police company behaviour effectively in this regard.

4.2.2 Zero Hours Contracts/ Precarious Work

LAPFF considers that, on balance, there is no clear evidence that business models based on zero-hour contracts and precarious work outperform business models with different and more inclusive human capital strategies.

Companies are quick to point to the flexibility of zero-hour contracts as enabling cost efficiencies. However, research suggests that “managers... should strive to develop

a long-tenured workforce whose skills are tied to the firm's unique context" in order to create shareholder value. This situation seems less likely if workers have contracts that do not guarantee consistent work. This finding directly contradicts the argument that short-term, precarious (in other words, unstable and uncertain) work arrangements create value for companies and shareholders.

As demonstrated through the literature, it can take at least four or five years for positive human capital practices to filter into a company's share price, and the benefits of training and skills development can take a number of years to manifest. If workers are on short-term contracts and/or do not have regular work, they do not have the opportunity to develop many skills, let alone firm-specific skills, that will allow them to contribute to the company in a way that creates value for shareholders. This trend is at risk of increasing if workplace issues are not considered in the context of the required energy transition.

Therefore, while the occasional zero-hour contract might prove mutually beneficial for both the company and the worker, a large number of zero-hour contracts used by a company for extended periods could point to a business strategy or business model problem. This situation could suggest that a company's human capital management programme might not be investing adequately in staff in a way that contributes to the company's long-term value.

The evidence of the direct link between zero hours and precarious work contracts and shareholder value seems tenuous from the academic evidence and in the light of this, companies should have to justify their use to shareholders.

4.2.3 Living Wages

LAPFF supports payment of a living wage as a best practice and in corporate engagement addresses this issue on a case-by-case basis, given that the literature indicates human capital policies should work in coordination with one another to be truly effective.

In 2015, the UK government implemented a national 'living wage' that moves the minimum wage closer to the accepted independently set living wage.

While there is a general aspiration to promote the living wage at all companies, LAPFF research on the pros and cons of paying living wages did not find sufficient evidence to suggest that company payment of living wages in and of itself would lead to improved shareholder returns. The human capital literature could suggest why there is a lack of supporting evidence.

If, as suggested in the literature, human capital management works best when appropriate bundles of policies that make up a human capital management approach

are coordinated effectively, then a living wage policy might need to be coordinated with other human capital policies to ensure that each of the policies contributes well to an overall human capital management programme and the creation of shareholder value.

A number of companies have expressed concern lately that implementing a living wage could force them to reduce workforce numbers. However, it could be that a failure to coordinate human capital policies effectively and implement them in a broader human capital management programme may lead to this negative consequence rather than payment of living wages as a stand-alone policy. For example, if a living wage policy is not coordinated effectively with the broader human capital approach and business strategy, the broader business strategy or human capital approach might not be able to support the living wage policy, which could lead to undesired outcomes, such as redundancies.

The Forum considers that failure to pay a living wage is in itself a problem, and might also be used as a proxy to indicate less than optimal human capital management by a company, therefore prompting questions about a company's human capital management more broadly.

4.2.4 Blacklisting

LAPFF expects companies not to engage in blacklisting under any circumstances.

Blacklisting has been defined by the UK government as 'the systematic compilation of information on individual trade unionists and their use by employers and recruiters to discriminate against those individuals because of their trade union membership or because of their involvement in trade union activity'.

While LAPFF has never supported this practice, blacklisting has only been illegal in the United Kingdom since 2010. Some local authorities and businesses are now including anti-blacklisting clauses as part of their sourcing contracts.

4.2.5 Corporate Dualism

LAPFF expects that European-based companies with good track records on employee relations at home will take steps to ensure that subsidiaries abroad maintain employee relations of an equal standard. Where this is not the case, LAPFF expects companies to engage an independent monitor to help raise labour standards abroad to those practiced in European operations.

LAPFF notes the phenomenon of UK-based companies maintaining good labour practices in Europe but supporting or tolerating poor labour practices in the U.S. because U.S. labour laws around trade union rights are weaker.

LAPFF has witnessed this practice first hand through its company engagement. Based on these engagements, the Forum is concerned that given the time it can take for human capital performance to surface in a company's share price, investors could see negative performance consequences of a company's use of corporate dualism in the medium to long-term.

4.2.6 Supply Chain Conditions

LAPFF considers that companies should be able to demonstrate that they are upholding and/or facilitating good labour standards in their supply chains through their human capital management programmes.

While literature on human capital does not tend to cover ethical supply chain management, there have been significant legal developments in the past few years to facilitate reporting on ethical supply chain practices. The UK Modern Slavery Act came into effect during 2015, and follows the 2010 California Supply Chain Transparency Act in the US in requiring companies to report on efforts to ensure child labour and forced labour are not occurring within their supply chains.

Since then, two tracks of law have been developing in this area. The first is mandatory human rights and environmental due diligence. For example, there is the [French loi de vigilance](#) that calls on French companies to produce and implement their own human rights due diligence plans and ensure that their suppliers and business partners do the same. Similar laws are under discussion and development in a number of other EU countries and the UK. The EU has recently agreed to a directive on sustainable corporate governance due diligence that covers this issue too. The second track includes targeted pieces of legislation, in the vein of the UK Modern Slavery Act. For example, the US has passed legislation banning the import of goods produced using child and forced labour.

The UN Guiding Principles on Business and Human Rights, which some commentators already consider to be soft law, find a responsibility for businesses to respect human rights, which incorporate labour rights. This responsibility, to the extent they have leverage over these rights, extends to their supply chains. The due diligence component of the Guiding Principles also includes a responsibility to report on company efforts in relation to human rights in the supply chains, including conduct affecting the work force.

From an operational perspective, supply chain management significantly affects how well a company can deliver goods and services to consumers and therefore can affect company performance and value. Therefore, failure to consider supply chain operations through a human capital lens could indicate that a company's human capital management is less than optimal.

4.3 Human capital management

4.3.1 Staff Training

LAPFF considers that in addition to disclosing the amount spent on training and development per employee, companies should provide some indication of training topics, how they relate to the promotion of business strategy and growth and how effective the training was.

Firm-specific training and long-tenured workforces can create more value for companies, it therefore makes sense that appropriate training and skills development for staff should be a critical element of creating long-term value for companies.

However, metrics focusing exclusively on headcount (in other words, the number of employees trained) are of less use than narrative explanations of how training programmes create value for companies. In other words, more qualitative assessment data could be helpful here.

4.3.2 Workforce diversity

LAPFF encourages corporate reporting on a broad range of workforce diversity indicators, including gender, age, work experience, education, socio-economic background, tenure, sexual and gender orientation and ethnicity, among other relevant information, as one measure of whether a company has effective problem-solving mechanisms in place on the understanding that this is likely to contribute to the creation of long-term value for shareholders.

Evidence suggests that diversity is an important element of human capital management that can have a positive effect on firm performance. Diversity has been linked to better problem solving, innovation and creative solutions, attracting and retaining better talent, reducing exposure to lawsuits, and better overall performance and decision-making at the strategic level. And, in the case of LGBTQ+ diversity, a workplace environment where people feel uncomfortable about expressing their sexuality is likely to make that worker less productive and more likely to leave their employer. More broadly, the Forum believes that there is a link between good employment practices (such as having a diverse workforce) and the creation of investment value and corporate prosperity. While we encourage corporate reporting

of workforce diversity, such reporting should be conducted in an appropriate and sensitive manner and should always be done anonymously and on a voluntary basis.

4.4 Human rights

4.4.1 Human Rights Policies

The Forum encourages companies to adopt human rights policies and management practices in line with the UN Guiding Principles on Business and Human Rights and believes these policies and practices should be disclosed to shareholders. This includes meaningful engagement with affected stakeholders, such as workers and communities.

The Forum views human rights as an important business issue and a potential indicator of investment risk, in line with the position in the UK Companies Act. The Forum has a long history of engaging companies on human rights issues, particularly regarding health, safety and employment practices but not limited to these areas. Corporate respect for human rights covers both direct and indirect impacts by companies. In other words, it extends to include the rights of people that are not only directly employed by companies, but those individuals and communities that may be affected by a company's operations. Companies operating in conflict zones or those with significant operational footprints may be particularly exposed to human rights risks and may require enhanced protection of adversely affected stakeholders and disclosure of steps companies are taking to respect human rights.

We take the view that the way companies manage human rights can affect companies' reputations and their ability to operate and grow their businesses effectively, sustainably, and profitably. Therefore, improved disclosure of how companies prevent, monitor and respond to human rights risks (including labour, health and safety, and community-based risks), as well as remedial measures they undertake when adverse human rights impacts are uncovered, would be welcomed.

4.4.2 Human Rights Expectations of Companies

Companies should be managing human rights impacts, including by ensuring board oversight, engaging affected workers and communities, undertaking impact assessments, acting on those assessments, and assessing the financial materiality of human rights impacts.

Based on its work on the mining sector, LAPFF considers those with significant human rights risks should:

- Have boards with at least one member with an awareness of and expertise in human rights with the authority to help develop a culture of respect for human

rights at board level and throughout the company, whilst respecting the wider diversity challenge.

- Ensure the strategic importance of human rights and the environment, including in relation to climate change and a fair and just transition.
- Undertake appropriate stakeholder mapping to identify all affected stakeholders that need to be heard in considering when undertaking or progressing a given project or activity.
- Carry out assessments aimed at identifying and determining human rights and environmental impacts related to your business conduct rather than just identifying and assessing business risks related to human rights violations. These assessments should be carried out in consideration of company efforts to mitigate and adapt to climate change.
- Guarantee access to the full text of the environmental impact studies on the internet or on the company's own platform for this purpose.
- Engage meaningfully with stakeholders, including workers and communities affected by the company's operations as an evidence and impact check on new technology deployed to monitor social and environmental impacts or to create more sustainable operating procedures.
- Embed human rights and stakeholder input – including from workers and affected communities – in board and company decision-making in line with international human rights and environmental law, particularly through adhering to the principle of free, prior, and informed consent (FPIC) even if it means not going ahead with a project in some cases. In the latter case, work with affected stakeholders, business partners, and investors to determine viable alternative project plans.
- Integrate affected stakeholder input, including from workers and communities, into operational-level grievance mechanisms, including how to develop appropriate responses to grievances.
- Not blame affected stakeholders, including workers and community members, for the shortcomings of the company's human rights approach and impacts.
- Draft contracts with business partners and affected stakeholders, including workers and communities, to allow for compliance by all contracting parties with corporate human rights and environmental responsibilities.
- Engage openly and honestly with all stakeholders, including workers and community members, affected either directly or indirectly by the company's

operations instead of cherry-picking engagement, and build their input into corporate decision-making.

4.5 Human capital: executive roles

4.5.1 Executive Search

All new executive director positions should be publicly advertised, accompanied by a job specification document, to encourage robust competition for positions and improve the diversity of candidates.

We believe that the current market for executive directors is distorted. The small and relatively homogenous pool of candidates that companies currently draw from in the executive search process serves to perpetuate the escalation of executive pay through a cycle of golden handshakes and golden parachutes. Shareholders can gain the most value out of an executive search process (and therefore negotiate to pay the lowest price for the best candidate) if the search process is both transparent and draws from a broad pool of candidates with diverse backgrounds and experience.

4.5.2 Candidate Recruitment

Companies should provide a transparent and equal opportunity recruitment process and give serious consideration to internal candidates for executive director roles. They should also implement a robust succession planning process to identify and develop future leaders.

All recruitment processes should be transparent and give all candidates, internal and external, an equal opportunity to be considered for the role. We question the assumption that all executive-level skills are transferrable across companies and industries, and question the value that companies increasingly attribute to ‘superstar CEOs’. Clearly, in some circumstances, recruiting an external executive to bring new thinking and an outside perspective may be needed. However, we are of the view that external recruitment can sometimes lead to high payouts for new executives while resulting in mismatched expectations, culture clash, or longer induction periods that may harm the business and provide poor value for money. For these reasons, internal candidates should be given serious consideration in the recruitment process.

4.5.3 Directors’ Service Contracts

Companies should fully disclose directors’ service contracts and all contracts should include a notice period of no longer than one year.

The most common notice period for directors’ contracts is one year, which has reduced substantially over the past decade due to investor pressure. Rolling contracts

of longer than one year can and have led to excessive compensation payments. Even a one-year contract could be considered too long, especially when it can be a vehicle for rewarding executives for failure.

In UK common law, there is an obligation on the employee to seek work (to 'mitigate' their loss) and, if they secure work before the end of the notice period, they should cease claiming remuneration from the original employer. Companies have the right to enforce this duty of mitigation by negotiating the level of compensation payable. Yet most companies do not state that they will seek to apply mitigation during settlements and those that do, often do not do so in practice. Companies should apply the principle of mitigation rigorously.

Liquidated damage provisions, or predetermined compensation clauses, are useful for clarifying the situation for both company and employer and can be a simple alternative to mitigation by guaranteeing payment that poses less cost to the company. For instance, if a contract provides for one year's notice but only six months' liquidated damages, the company has capped its liability at the lower amount. However, the liquidated damages set out in contracts are usually equivalent to, or sometimes more than, that payable under a normal notice period. Any liquidated damage provisions should be clearly set at a level that is lower than the payment due under a notice period.

5 LAPFF's approach to engagement

LAPFF's central purpose is to help its members execute their fiduciary duty to generate required returns from investing. It does this by bringing members together to present a unified voice to the companies in which its members invest, and to the regulatory and financial systems that support the investment industry. By doing this, LAPFF promotes the highest standards of corporate governance to protect the long-term value of local authority pension funds.

As a forum, LAPFF focuses on the environmental, social and governance (ESG) issues that concern its members and targets relevant corporate boards to achieve change. LAPFF understands the costs of poor governance standards. That is why the Forum proudly leads the way on engaging with companies in the UK and around the world on issues such as climate change, executive pay, and reliable accounting. However, the Forum's work does not stop at the limits at which many investors define engagement. LAPFF recognises the role of responsible investors is not just to engage with companies but also stakeholders, such as employees and local communities affected by corporate activities; to gain alternative perspectives on the risks that a company's behaviour may contain, and to include these in LAPFF engagements, as it seeks to enhance and protect the value of its members' investments.

5.1 Developing an Engagement Strategy

In fulfilling its aim of protecting the pensions of members' beneficiaries, the Forum assesses long-term environmental, social and governance risks and opportunities on a case-by-case basis to determine appropriate shareholder engagement strategies. LAPFF considers that pension funds should not now have to opt into considering responsible investment factors, but should be required to address such issues as part of their routine investment processes.

LAPFF recognises that at the heart of its mission is the fiduciary duty of its member funds to protect the pensions of their beneficiaries. This requires a long-term perspective, which increasingly includes how to structure a fair and just transition to a decarbonised economy. The Forum is committed to conducting shareholder engagement on behalf of its members in a way that helps fulfil their fiduciary responsibility and safeguard long-term investment returns; this is the underlying consideration when developing and deciding on Forum policies on shareholder

engagement. From the perspective of the Forum, this means conducting its shareholder engagement in a way that recognises business risks and opportunities connected with governance and sustainability factors, including proactively consulting on executive remuneration. LAPFF understands this engagement to mean that LAPFF funds have the power to engage with the responsible investment agenda, provided that their activities are reasonable, proportionate, minimise adverse investment risk impact and do not undermine long-term investment returns to their pension funds. LAPFF supports the UK Corporate Governance Code which states that the board should keep in touch with shareholder opinion in whatever ways are most practical and efficient.

The Forum decides on the level of its involvement in any shareholder campaign on a case-by-case basis, actively monitoring the marketplace to enable the full Forum membership to take strategic decisions in responding to the policy issues on the Forum's agenda, as well as initiatives developed by other investment bodies in the UK and global markets. When the Forum receives information, from its members, external organisations such as other institutional investors, investor bodies, NGOs or trade unions, or through its own monitoring on governance or sustainability concerns, the research and engagement partner will assess the significance of any issue raised, and draft a position paper for discussion by the Executive Committee and/or the full LAPFF membership.

These discussions serve to assess what policies LAPFF will adopt in relation to the investment issues at stake, the degree to which the Forum can make a difference to the issue at hand, and which companies will be targeted should LAPFF opt to pursue engagement. After such a decision is made, its research and engagement partner undertakes a detailed comparative assessment to identify and contrast best practice where possible, and then proposes an engagement strategy to be adopted by the Forum and executes that strategy.

5.2 Forms of Engagement

LAPFF uses various forms of shareholder engagement including voting, correspondence, one-on-one company meetings, issuing voting alerts, attending AGMs, participating in investor coalitions, submitting shareholder proposals and encouraging vote declarations depending on the response of the targeted company.

The Forum chair will usually initiate dialogue with a company by writing to the chair of the board, with the objective of obtaining more information where required, and to request a meeting with the chair or appropriate board member to explore the company's approach to any environmental, social and governance issues deemed

particularly relevant to company performance. Progress is monitored at all companies that the Forum engages with, to identify any changes in practice and to determine the need for further action.

One element of engagement is attendance at company annual general meetings (AGMs). LAPFF considers it important to publicly recognise progress made by companies, for pressing for further improvements as well as using this as an avenue for opening a dialogue with a company's board where a previous engagement relationship may not exist. On occasions, the Forum will issue voting advice to members by means of voting alerts. Recommendations may be positive, i.e. to support particular resolutions or director elections, or may target a particular concern through opposing relevant resolutions. The Forum also issues press releases from time to time.

Shareholder resolutions are another element of engagement strategy and are regarded by the Forum as a means to focus attention and resources on particular issues. While the Forum will consider supporting the filing of resolutions through member fund holdings, it will often seek collaboration with other investors. The Forum will support appropriate resolutions by other proponents where they are aligned with the Forum's work programme and policies.

The advantage of shareholder resolutions is that they can be focused on specific issues, and represent an escalation of engagement. This can be in a positive manner or where the company has not addressed investor concerns sufficiently or substantively.

5.2.1 Collaboration with other institutional investors

The Forum is committed to collaborating with other institutional investors or investor bodies where this will further the fulfilment of the Forum's aims and mission, but reserves the right to take its own initiatives where appropriate.

Collaboration is fostered through active participation in a range of networks, including the Climate Action 100+ (CA100), the CERES Investor Network on Climate Risk and Sustainability, the Principles for Responsible Investment (PRI), and other investor-led bodies. LAPFF has been a PRI signatory since 2007. LAPFF also proactively consults with institutional investors that hold long-term positions in the firm regarding their views on the company's pay practices. The Forum will endeavour to consult with both large and small shareholders, and in particular with those that may take a critical view.

5.2.2 The importance of voting

The Forum believes that voting is a core element of engagement and supports vote declarations prior to AGMs as well as the public disclosure of full shareholder voting records.

Voting has legal power and is quantifiable. Ultimately voting is most effective when embedded within a broader engagement process. LAPFF recommends that the government should exercise the reserve power in the Companies Act to mandate full voting disclosure. In addition, there should be prescription as regards the nature of disclosure in order to facilitate comparative analysis.

The benefit of full disclosure is that it would facilitate the analysis of how various investors exercise their ownership rights. With the patchy reporting under the current voluntary regime this is simply not possible. LAPFF considers that the costs of making voting data public are negligible.

5.2.3 Pooled Funds

Pooled funds should be encouraged to facilitate pro rata voting and to explain publicly if and why they do not.

Furthermore, the inability of asset owners to split votes in pooled vehicles restricts meaningful involvement and engagement on the part of pension funds trustees and can be a significant barrier to effective stewardship. We consider that it should be a best practice requirement, on a comply-or-explain basis, for pooled funds to enable voting decisions to be made by the underlying asset owners and to be reflected in the votes cast. Pooled funds should be encouraged to facilitate pro rata voting and to explain publicly if and why they do not, in line with the comply-or-explain enforcement of UK Corporate Governance and Stewardship Code compliance.

5.2.4 Escalating the Forum's engagements

LAPFF is committed to escalating engagements where progress is considered too slow or action inadequate

To reflect its engagement style, LAPFF has a set escalation strategy for company engagements:

- The Forum prefers to meet with company chairs or board directors in the first instance, either one-on-one or through appropriate collaborative investor engagements.
- If these meetings and subsequent meetings do not meet the Forum's expectations in terms of a company's receptiveness to LAPFF's agenda and

performance against the objectives and milestones set for the engagements, the Forum might issue a voting alert to its members (voting alerts can reflect positive developments too, with LAPFF choosing to support a resolution as a means of recognising a company's progress).

- If progress falters, the Forum can choose to initiate a media campaign.
- It might choose to join or instigate a collaboration with other trusted investors.
- It may also file a shareholder resolution, or co-file a resolution with other shareholders.

5.3 Shareholder relations

Companies should disclose the share structure, voting rights and any other rights attached to each class of shares.

Shareholders need to have clear information about their rights and those of other shareholders. Shareholders who have the same financial commitment to the company should have the same rights. Dual share structures with differential voting rights are disadvantageous to many shareholders and should be reformed.

A company's authority to issue shares is among the routine items for which shareholder approval is required at general meetings. LAPFF supports the pre-emption rights principle and considers it acceptable that directors have authority to allot shares on this basis. Resolutions seeking authority to issue shares with and without pre-emption rights should be separate and should specify the amounts involved, the time periods covered and whether there is any intention to utilise the authority. LAPFF supports the disapplication principles set out in the Pre-Emption Group's Statement of Principles.

5.4 Engagement with Fund Managers

LAPFF encourages trustees to hold fund managers accountable by regularly reviewing their performance and company engagement activities.

The UK Stewardship Code has increased the focus on enhancing the quality of engagement between institutional investors and companies. The Code is addressed in the first instance to firms who manage assets on behalf of institutional shareholders to help improve long-term returns and the efficient exercise of governance responsibilities. The Kay Review recognises that asset managers have become dominant in the investment chain and therefore play a key role in 'exercising the attributes of share ownership'.

LAPFF has long believed that trustees have an active role to play in promoting good practice in corporate governance and social, ethical and environmental matters. An important way in which trustees can become more activist, even if resources may be limited, is by regularly reviewing their fund managers' engagement activities with a view to assessing the effectiveness of that engagement, on the basis of regular (e.g. quarterly) reports from fund managers or in meetings with them. As more local authority pension funds are investing in non-UK domiciled companies, engagement with non-UK companies is gaining in importance. Delegating shareholder engagement does not mean that trustees should simply let their fund managers take over shareholder activism. Delegation still requires responsible stewardship by trustees of their managers' delegated responsibilities, in line with the UK Stewardship Code.

5.5 Engagement with Asset Owners

LAPFF considers that the closer company managers are to their underlying asset owners the more understanding they are likely to generate for their business strategies.

The Forum engages with a large number of UK companies per year. In these engagements we value the explanation from company managers of their business strategy and particular challenges they face. We consider that the closer company managers are to their underlying asset owners the more understanding they are likely to generate for their business strategies. The present culture of quarterly results presentations to city analysts and portfolio managers is probably an insufficient mechanism for such communications.

5.6 Engagement with Stakeholders

The Forum engages with communities and employee representatives and recognises the important information these stakeholders can provide about investee companies.

Because it has seen the value of gaining perspectives on an issue other than solely from the companies that lie at the heart of members' ESG concerns, LAPFF seeks to engage company employees and local communities affected by a company's behaviour.

5.7 Engagement with Public Policy

LAPFF engages with policymakers to promote the highest standards of corporate governance.

LAPFF seeks to enhance corporate governance policy and shareholder rights to help protect investments. The Forum engages policymakers on issues relating to the LGPS and financial markets. As public policy often sets the framework for the Forum's issues-based and company engagements, LAPFF also seeks to ensure regulation, policies and programmes support long-term value creation through high environmental, social and governance standards.

About this document

Policies within the document are considered by LAPFF as helping to secure the highest standards of corporate governance and thus helping protect the long-term interests of LAPFF members. This document is based on LAPFF publications, consultation responses and reports agreed at LAPFF executive and business meetings. These materials draw on research and findings from a range of governmental, academic, business, and non-governmental organisations as well as from PIRC, its research and engagement partner. LAPFF policies evolve with the latest research and engagement the Forum undertakes on environmental, social and governance issues. This document is updated to reflect these new insights about how best to promote responsible investment.
